## Grading Scale

Grade reports are available to students at the completion of each term. Final grades are based on the quality of work submitted and as demonstrated by assignments, examinations, and/or class projects as outlined in the course syllabus. Earned Grade Points are calculated for each course by multiplying the Grade Points (quality point value) for the grade received for the course times the credit hour value of the course. For example, a 4-credit-hour course with a grade of “B” would earn 12.0 quality points [credit value of course (4) times grade point value of B (3)].

Letter Grade	Numeric Grade	Grade Points	Included in Credits Earned	Included in Credits Attempted	Included in CGPA

## Grade Point Averages

A student's grade point average (GPA) is computed by dividing the total number of grade points earned by the total number of credit hours for which grades were awarded. The grade points are calculated by multiplying the quality point values for the grade earned for each course by the number of credit hours associated with the course. The term GPA applies to work in each term. A student's overall academic average is stated in a cumulative grade point average (CGPA), which is based on all grades and credit hours earned in the program of study to date.

The term GPA and CGPA range from 0.00 through 4.00 and only includes courses that are required for graduation in the student's current program of study and exclude developmental courses and any other courses considered to be ineligible by licensing, state, or provincial authorities. The CGPA is used to determine whether a student is meeting the standards of academic progress and eligibility for graduation.
